

Junior Postdoctoral Researcher Position

available at the VIB Department of Plant Systems Biology, UGent

Job description

The position is available at the **Oxidative Stress and Cell Death group** to explore genetic and epigenetic mechanism of abiotic stress tolerance in plants.

The aim of the research is to identify genes and molecules that play key roles in stress tolerance mechanisms in plants cells.

The project will be carried out in close collaboration with Bayer BioScience Ghent. More details on the project will be provided to interested applicants.

Profile

- You recently obtained a PhD in biotechnology, molecular biology or applied biological sciences.
- You have experience or an outspoken interest in plant molecular biology.
- Experience in plant stress physiology are an asset.
- You read and speak scientific English fluently and you have good communication skills.
- You can work independently, yet you are a good team player.

Position

Three years

Appointments will begin as soon as possible.

The position remains open until a suitable candidate has been recruited.
